ALLD 206 Paragraph Remediation, ALLD 210 Understanding Learning Differences, and ALCA Computer Access Evaluation be deactivated. These classes were part of Student Tutorial and Evaluation Program (STEP) in the Adaptive Learning Division which no longer exist. In addition, the classes haven't been taught since Summer 2016 and some of the classes changed from instruction model to a service model.

New course proposal for LINC: 78D Physical Computing Fundamentals. This would be an entry-level makerspace-centered course that combines coding and circuitry with the purpose of making interactive products. Ideally, I'd like to eventually add it to the CA in Makerspace Coordinator.

New course proposal for LINC: 84D Vector Based Graphic Design for Makerspaces. Currently, we have LINC 73H Adobe Illustrator Overview as part of the Certificate of Achievement in Makerspace Coordinator, but this limits us to only working with Illustrator. Given that Creative Suite is expensive and complicated for students to use off-campus, we'd like to be able to open up this instruction to vector-based graphic programs in general, including free and cloud-based options. We debated just trying

Standalone approval request for LINC 87: Seminar in Teaching with Education Technology. This course was removed from the Certificate of Achievement in Instructional Design and Technology because we have not been offering it frequently enough for students to be able to rely on it for the certificate. It is still a valuable course, however, and does address a workforce need.

Standalone approval request for LINC 82B Developing Instructional Materials. It was removed from the Instructional Design and Technology Certificate because we were not offering it in a way that it could be easily completed by students seeking this certificate. We are offering it as part of the MERIT teacher professional development program. I will be looking into making MERIT into a certificate program, but since it doesn't exist yet, this is the current request.
